

FOR IMMEDIATE RELEASE

Ucamco's Visual HyperScripting – more power, more savings.

In December 2010 Ucamco launched Visual HyperScript, their breakthrough PCB CAM automation tool. It was enthusiastically received by customers. Ucamco have now released UCAM v9.2, making Visual HyperScript more powerful and even easier to use.

Gent, Belgium – March 10, 2011 –

In December 2010 Ucamco launched their breakthrough PCB CAM automation tool, Visual HyperScript, the key feature of UCAM Version 9.1. It has been enthusiastically received by customers. To quote Michael Thiel from Multicircuits in the USA: *"Visual HyperScript is kickass! I just saved myself \$2200 in external scripting!"*

Custom automation slashes the time per job and increases security but until now it has needed many hours of work by specialist programmers. With Visual HyperScript all experienced CAM engineers can generate automation programs without specialist training and without disrupting production.

Ucamco have now released UCAM Version 9.2, making Visual HyperScripts more powerful and even easier to set up. New commands extend Visual HyperScripting to automate data preparation for electrical test. New functionality based on the feedback from users makes it easier to start scripting and to share scripts across a company. At the same time Ucamco have put a short training video on their website which shows how Visual HyperScripts cut CAM time and how to start to use it.

Karel Tavernier, Ucamco Managing Director, comments: "Our customers have responded enthusiastically to Visual HyperScripts and provided many suggestions to make it easier to use. Visual HyperScripting can cut CAM time up to 95% for some operations and we want our users to be able to exploit its power as quickly as possible. We recognise that in today's time-pressured business environment training and support are an essential part of any new software package. So we have backed the release of Visual HyperScripting with a clear training video. Our customers have invested in our software and software maintenance: we want to boost the value of their investment."

Visual HyperScript is now an integral part of UCAM. It is delivered free of charge to all UCAM users with a maintenance contract and to all purchasers of UCAM Version 9. The Visual HyperScript video can be seen at www.ucamco.com.

About Ucamco (www.ucamco.com)

Ucamco (former Barco ETS) is a market leader in PCB CAM software and laser photoplotting systems with a global network of sales and support centers. It is a sister company of Gardien, see www.gardien.com. Ucamco has more than 25 years of continuous experience in developing and supporting leading-edge photoplotters and front-end tooling solutions for the global PCB industry. Key to this success has been our uncompromising pursuit of engineering excellence in all our products. More information at www.ucamco.com
