

FOR IMMEDIATE RELEASE

Accurate PCB analysis in minutes

Ucamco is pleased to present Integr8tor v6.1, the latest version of its sales and engineering server for auto input and design analysis. This new improved version speeds the PCB analysis process, enables CAM engineers to spend more of their time on core business tasks, and helps you to generate fast, accurate quotes.

Gent, Belgium – April 18, 2011 –

As a manufacturer of prototype PCBs, high mix or quick-turn circuit boards, you know that speed is of the essence. Your customers send you numerous quote requests each week, and need answers fast. They have no time to lose, and neither do you.

What do you do? Go the CAM route and spend hours, maybe days, costing your boards? This will give you accurate results but the time needed to analyse some products may lose you orders to faster competitors. One alternative is to create a quote based on past experience and less detailed information. This is certainly faster, and may get you the order. But do you really know what the board is all about? Do you have detailed knowledge of the manufacturing issues and the costs involved? And is the product, and its price, right for your business?

It's a real quandary, one that PCB manufacturers like you face daily. That's why we developed Integr8tor, the PCB industry's only sales and engineering server for auto input and design analysis. This software package automatically recognises all standard format design data as it enters your e-mail system, and downloads it, creates a job number for it, and analyses it, 24/7. It gives you a full breakdown of the design, and even flags missing, or erroneous data. And it does so in minutes, feeding the results directly to your CAM department. Where information is missing, your engineers can refer to the design notes or revert to the customer, and in a single call, ask for all the data they need to complete the analysis.

Integr8tor carries out design-rule, DfM and capability checks that will tell you whether you can make the job and where manufacturing issues may arise, and its output can be fed quickly and easily into your quote engine. This can be automated if your system accepts XML formats, speeding the quoting process still further and eliminating the risk of human error.

At the same time, Integr8tor automatically sets up a CAM job, so that when the order is confirmed, your busy engineers are saved a great deal of repetitive work in the subsequent CAM process. This frees them up to focus their specialist skills on core profit-generating tasks, perhaps allowing them to help bring in more complex work. At the same time, it also supports your sales efforts by enabling you to answer your customers faster, and with more accurate information, helping you to develop relationships built on professionalism and trust.

We are so convinced of the value of Integr8tor to your business that we are actively working with over 30 clients, all of whom have installed the system in their PCB operations, whose feedback is of fundamental importance in helping us to improve our offering.

With their help we have designed our latest version, Integr8tor v6.1, to give you even more: enhanced input algorithms for added automation; improved integration capabilities; a new customisable GUI, our Flexible Locations capability and a sophisticated scheduler, all of which make job management faster and easier; and

a host of added capabilities and functionality that make Integr8tor v6.1 quite simply the most powerful PCB analysis tool in the industry. All while reducing your manual operations by 20% and your CAM operations by up to 30%, and allowing you to generate quotes in a fraction of the time needed using any other method.

Integr8tor v6.1 is available now for download. For information on how to get your Integr8tor v6.1 license key, contact Ucamco.

About Ucamco (www.ucamco.com)

Ucamco (former Barco ETS) is a market leader in PCB CAM software and laser photoplotting systems with a global network of sales and support centers. It is a sister company of Gardien, see www.gardien.com. Ucamco has more than 25 years of continuous experience in developing and supporting leading-edge photoplotters and front-end tooling solutions for the global PCB industry. Key to this success has been our uncompromising pursuit of engineering excellence in all our products. More information at www.ucamco.com
